

Amendments to the Specification:

Title: On page 1 replace the title to read in full as follows:

**METHOD FOR PROVIDING KIOSK SERVICE OFFERINGS IN A PERSONAL
AREA NETWORK**

Summary of the Invention: On page 4 replace lines 6-15 to read in full as follows:

The present invention provides a ~~system and~~ method for providing electronic services such as applications and data to wireless devices in a personal area network (PAN) via a kiosk. The invention incorporates service discovery protocols and short-range radio communications to allow wireless devices entering the PAN to identify the kiosk and request therefrom selected electronic services. In consequence, electronic services can be delivered to a wide variety of wireless devices without consuming substantial system resources and network bandwidth. Additionally, heretofore single-purpose existing kiosks, such as payphones, ticket counters and gasoline station islands, can be extended to offer new electronic services thereby adding value to these existing kiosks.
